EDUCATION

Politecnico di Milano — **Milano, IT**
Bachelor in Computer Science — *September 2019*

Politecnico di Milano — **Milano, IT**
Master in Computer Science — *Expected Graduation: September 2021*

EXPERIENCE

Politecnico di Milano — **Milano, IT**
Sysadmin/Full Stack developer — *June 2018 - September 2021*
I was responsible for designing and building a database and its web app for the department of civil and environmental engineering. My responsibility was to design the database schema, design the web app frontend and backend service and to manage the server that hosted the website and its APIs.

Politecnico di Milano — **Milano, IT**
Backend and DevOps developer — *February 2019 - July 2019*
During a course in my MSc me and my teammates worked in close contact with a team from Trenord Italia to develop a POC about an automated ticketing system that worked solely by using the customer smartphone sensors.

TECHNICAL SKILLS

Experience in Product Management and Software Engineering with a great interest for backend/distributed systems and system administration.

Technical tools
- Designing: **Adobe Photoshop, Adobe Illustrator, Adobe XD, Adobe Premiere Pro**
- Programming technologies: **SQL, Python, C, Java, Rust, Go, HTML, JS, Swift**
- VCS: **Git, GitHub, GitLab, Bitbucket**
- System administration: **Ansible, Bash**
- Blockchain: **Ethereum, Hyperledger Fabric**
- Team management framework: **SCRUM, Agile**

Tools and Frameworks
- **Vuejs**
- **Docker**
- **Vagrant**
- **NGINX**
- **Hyperledger Fabric Blockchain**
- **MySQL, Postgres, Redis**
- **AWS EC2, AWS S3**

AWARDS

Computer Security Challenge — *July 2020*
During Computer security course I was one of the few people to complete all the 20 assigned challenges that included both binary and web/network vulnerabilities.

PROJECTS

Automated web app, blockchain backed, code generator *September 2020 - September 2021*
For my thesis project I have worked on a model driven approach to automatically generate an entire web application with a backend that made use of a blockchain starting from a representation model (also developed during my thesis). The thesis included an extensive work and study of the Hyperledger Fabric project held by the Linux Foundation, the representation model and parsing implementation and finally the code generator to deploy the web application along with its blockchain powered backend.

Lode *Feb 2020 – September 2020*
`https://github.com/mattrighetti/Lode`
I developed this application to get rid of all the excel pages I had to manage my university's marks and assignments. It was developed using Swift and it was released in 2020 to the app store and also made available as an open source project for others to see and learn.

ColliGo *Feb 2020 – May 2020*
`https://github.com/andreavitaletti/ColliGo`
In the middle of the pandemic, me and other teammates offered to work for the community with a professor from La Sapienza university in Rome to develop e flexible application whose aim was to avoid queues in front of stores but also to give store owners a platform with which they could reach a wider audience during a struggling period and organise their businesses in a smarter way.

webex-dl *October 2020*
`https://github.com/mattrighetti/webex-dl`
I developed this program that could download recorded lessons hosted on webex during the pandemic that was used by around a thousand users in my university according to GitHub's stats. This was developed entirely in bash.

teams-dl *February 2021*
`https://github.com/mattrighetti/teams-dl`
This was developed way before webex-dl when my university hosted its online lessons on Microsoft Teams and I wanted to dig into more advanced bash features and HLS video encoding and at the same time needed to download some recorded lessons that I was not able to attend. This program was developed using bash too.

HNReaderApp *June 2021*
`https://github.com/mattrighetti/HNReaderApp`
I've developed HNReader to have a native macOS app to read my daily Hacker News. I'm not a fan of the minimalist design of the original website and therefore I went for a custom design, this also was my first attempt to develop a macOS application.

Other side project can be found at my Github page at the link
`https://github.com/mattrighetti`

ADDITIONAL

- Relevant courses: Distributed Systems, Advanced Algorithms and Parallel Programming, Middleware Technologies, Advanced Computer Architecture, Artificial Intelligence
- Spoken Languages: Fluent in English and Italian
- Article writer: From time to time I like to discuss or, more generally, write some guides or thoughts that I had/have with some technology, framework or language that I feel other people can appreciate or get emboldened by.
- Hardware enthusiast: I like to program micro controllers, build computers, build keyboards and program custom firmwares for them.
- Computer security: I'm very interested in the computer security field and I always find myself participating in a lot of CTF competitions with colleagues to improve my knowledge on the subject.

I hereby authorize the use of my personal data in accordance to the GDPR 679/16 - "European regulation on the protection of personal data".
